

# Next Generation Silencer (NGS)

  
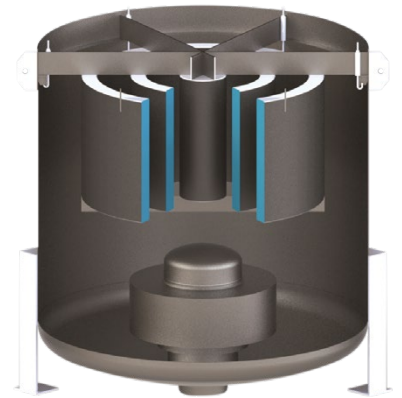

*Engineering  
GREAT Solutions*

**Built upon decades of experience and a global install base, the new design enhances performance with proven technology and increases serviceability**

IMI Fluid Kinetics' NGS unit is the latest evolution in silencer design. Along with enhanced performance, the silencer offers increased serviceability with removeable cores and can be disassembled and reassembled in a matter of hours.

## Design features

- > Optimised design to reduce infrastructure requirements
- > Revised footprint for ease of transportation and installation
- > Replaceable acoustic core assembly
- > Inlet connection options to suit a variety of piping needs
- > Options include custom designed inspection ports, weather hoods and bird screens

## Engineered approach to vent systems

For optimal performance, let us provide you with an engineered system solution which combines low-noise DRAG® control valve technology with the noise attenuating capabilities of the new NGS units that is tailored to your vent application.

By taking a combined system approach to product selection and sizing of the control valve and silencer, the system can be optimised for:

- > Cost of system
- > Size of equipment
- > Noise performance
- > Piping configurations
